

# Avid Editor Compatibility with Interplay Releases

In this section, the term Interplay components refers to the following:

- Media Indexer
- Interplay Access
- Service Framework
- (optional) Interplay Transfer client
- (optional) ProEncode client

The Interplay components are available on the “Install Editor Support” page of the Interplay Client Installer. Each Interplay version has its own Installer DVD or USB Flash Drive.

## Moving Editors Between Interplay Releases

Each editor has a matching Interplay release as shown by the “R” in the following table. The release contains the qualified Interplay components for that editor. You can connect an editor to different Interplay environments but you must install the qualified set of Interplay components on the editor. For example:

- If you connect an Interplay v2.1 NewsCutter® editor (NC v8.0.5) to Interplay v2.3, use the Interplay v2.1 Installer to install the Interplay components on that editor.
- If you connect an Interplay v2.3 NewsCutter editor (NC v5.5.1) to Interplay v2.2.1, use the Interplay v2.3 Installer to install the Interplay components on that editor.

The following table matches Avid editing application software releases with supported Interplay releases. An S indicates that the editor is supported in this Interplay environment. An R identifies the corresponding Interplay release that the editor software shipped with. **Install this version of the Interplay components on the corresponding editor.**
